## GREAT SHIELDING FOR MAXIMUM SIGNAL QUALITY

All of the above cables feature the shielding "S/FTP":

- S = braid shielded;
- FTP = foiled twisted pair: an aluminum foil screen around each pair (aluminum-mylar, referred to as PIMF)

### ENHANCED SECURITY.

It is impossible to remotely detect a signal being transmitted within a fiber cable. The only way to do so is by actually accessing the optical fiber itself. This makes fiber extremely attractive to governmental bodies, banks and other businesses with major security concerns.

### NO METALLIC COMPONENTS.

Fiber optic cable can be installed in areas with electromagnetic interference (EMI). This includes areas around utility lines, power-carrying lines and railroad tracks. Fiber is also ideal for areas of high lightning-strike incidence.

# For Uplink Connectivity and System Management

## The benefits of DAC cables over fiber optic and RJ45 cables

The Direct Attach Copper (DAC) cable is becoming increasingly popular in the network industry. Our passive SFP+ and QSFP+ twinax cables are an energy-efficient, low-latency and cost-effective alternative to fiber optic and RJ45 cabling. It's an excellent choice for short-distance structured cabling between switches and routers on one end and servers or storage on the other, be it in Top of Rack (ToR), adjacent rack, stacking of 10GbE switches or similar applications.

### Close to zero power consumption and a wide temperature range

DAC is comprised of a twinax copper cable terminated with SFP+ or QSFP+ connectors on both ends, which can provide an electrical connection directly into active equipment. Consuming less than 0.15 W due to its thermal design, this passive cable helps decrease your operating expenses. Its zero-heat production during operation makes it more versatile and usable in wider temperature ranges up to 70°C (158°F), which is particularly valuable in data centers.

### Lower cost and simpler to deploy than fiber optics

DAC cabling has a relatively simple internal structure with fewer components than fiber cables. This cable structure helps lower the purchase price for applications in high-bandwidth data transmission and saves you from having to buy separate transceivers. This, in turn, makes DAC cables a lot simpler to deploy since there are fewer parts to match to complete setup. When you make upgrades or replacements to your network, the cable's seamless Hot Swapping capability makes quick work of connecting new equipment (note that passive DAC cables are not suitable for long-range applications; at 7 m (23 ft.), they reach their transmission limit).

### Lower latency than RJ45 twisted-pair patch cables

This Direct Attach Copper twinax cable supports data transfer rates up to 40 Gbps, and its unique structure and signal transmission offers lower latency.

### Compatible with Cisco, HPE and many more

Our DAC twinax cables are either HPE- or MSA-compliant and therefore designed, programmed and tested to work with IntelNet Network Solutions, but also compatible switches and routers from Cisco, HPE, ZyXEL, TP-Link, Ubiquiti, D-Link and many more. For all compatible brands, please check [intellinetnetwork.com](http://intellinetnetwork.com).
