What is **USB Power Delivery?**

Ultra-fast   **Ultra-powerful**   **Smart & Safe**   **Universal & Convenient**

USB-Power Delivery (PD) is a fast-charging technology based on the USB-C standard. Certain Apple® and Android smartphones/tablets and various laptop brands support the technology, which provides much higher performance than standard charging methods.

USB-C PD is a new standard that can deliver up to 100 watts of power, which is enough to charge laptops and other devices that require more power than USB-C alone can supply. This specification was created by the USB-IF in response to requests from laptop manufacturers for a connector that could deliver more power.

Ultra-fast
In 30 minutes, a regular 5W charger can get an empty battery of an iPhone 11 Pro or Google Pixel 4 to only ~20%. Modern smartphones like these fully profit from USB-PD and support charging with 18W which boosts the battery to ~50% in the same time.
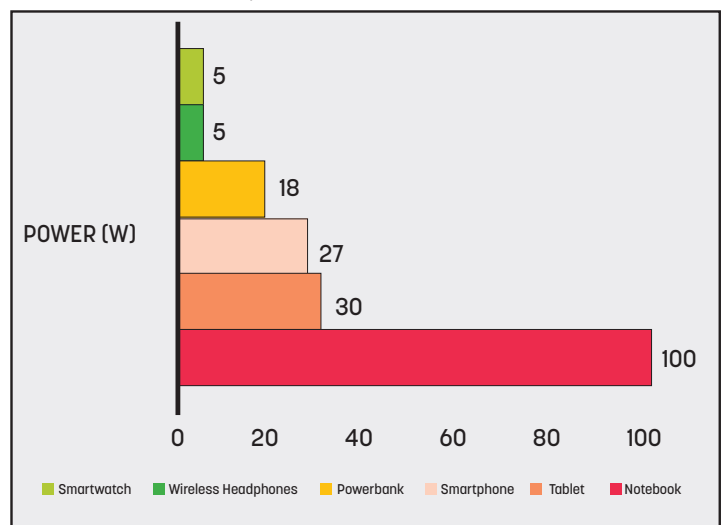

Ultra-powerful
USB-PD does not stop at smartphones. With a maximum output of 100W, this technology is powerful enough to even charge notebooks and power-hungry tablets like the iPad Pro 12.9" quickly.

Smart & Safe
With USB-PD, the cable, charger and device communicate with each other before any power starts flowing. That guarantees the safest charging with protection against overloading, over-current, overheating and short-circuits

Universal & Convenient
USB-PD is an open standard, so every manufacturer can adopt it. That makes it universal and allows you to charge such different devices as an HP laptop, a Nintendo Switch or an Apple MacBook Pro with one and the same compact charger.
