ADSL2/2+ Firewall Router  
Quick Start Guide**

**Version: 1.0**

**Date: 2008/06/24**

## Copyright Information

### Copyright Declarations

Copyright 2008 All rights reserved. This publication contains information that is protected by copyright. No part may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language without written permission from the copyright holders.

### Trademarks

The following trademarks are used in this document:

- Microsoft is a registered trademark of Microsoft Corp.
- Windows, Windows 95, 98, Me, NT, 2000, XP, Vista and Explorer are trademarks of Microsoft Corp.
- Apple and Mac OS are registered trademarks of Apple Inc.
- Other products may be trademarks or registered trademarks of their respective manufacturers.

## Safety Instructions and Approval

### Safety Instructions

- Read the installation guide thoroughly before you set up the router.
- The router is a complicated electronic unit that may be repaired only be authorized and qualified personnel. Do not try to open or repair the router yourself.
- Do not place the router in a damp or humid place, e.g. a bathroom.
- Do not stack the routers.
- The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius.
- Do not expose the router to direct sunlight or other heat sources. The housing and electronic components may be damaged by direct sunlight or heat sources.
- Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards.
- Keep the package out of reach of children.
- When you want to dispose of the router, please follow local regulations on conservation of the environment.

### Warranty

We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary to restore the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.

### Be a Registered Owner

Web registration is preferred. You can register your Vigor router via <http://www.draytek.com>.

### Firmware & Tools Updates

Due to the continuous evolution of DrayTek technology, all routers will be regularly upgraded. Please consult the DrayTek web site for more information on newest firmware, tools and documents.

<http://www.draytek.com>

## European Community Declarations

Manufacturer: DrayTek Corp.  
Address: No. 26, Fu Shing Road, HuKou County, HsinChu Industrial Park, Hsin-Chu, Taiwan 303  
Product: Vigor2710 Series Router

DrayTek Corp. declares that Vigor2710 Series of routers are in compliance with the following essential requirements and other relevant provisions of R&TTE Directive 1999/5/EEC.

The product conforms to the requirements of Electro-Magnetic Compatibility (EMC) Directive 2004/108/EC by complying with the requirements set forth in EN55022/Class B and EN55024/Class B.

The product conforms to the requirements of Low Voltage (LVD) Directive 2006/95/EC by complying with the requirements set forth in EN60950-1.

## Regulatory Information

### Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the use is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device may accept any interference received, including interference that may cause undesired operation.

Please visit [http://www.draytek.com/about\\_us/R\\_TTE\\_Certification.php](http://www.draytek.com/about_us/R_TTE_Certification.php).

This product is designed for DSL, POTS and 2.4GHz WLAN network throughout the EC region and Switzerland with restrictions in France. Please see the user manual for the applicable networks on your product.

# 1. Introduction

The Vigor2710 series features advanced bandwidth control mechanism such as IP-layer QoS, NAT Session Limitation, Bandwidth Borrowed, etc., to allow easy, flexible, reliable access control and bandwidth management.

The SPI (Stateful Packet Inspection) firewall uses object-based design to make settings of firewall policies easy. The CSM (Content Security Management) feature allows more precise and efficient access control for URL/Web Content Filtering, IM (Instant Messenger) and P2P (Peer to Peer) applications.

Vigor2710 supports up to 2 VPN tunnels using advanced protocols such as IPSec/PPTP/L2TP/L2TP over IPSec with AES/DES/3DES for encryption and MD5/SHA-1 for authentication.

Vigor2710 'n' models comply with 802.11n Draft-n standards. They support WEP/WPA/WPA2 encryption and MAC Address Control, Wireless LAN Isolation. The Wireless Rate Control function can adjust the data rate of each wireless station (client).

Vigor2710 'V' models provide two analogue phone connectors and one line port. It supports multiple SIP registrars with high flexible configuration and call handing options.

In addition, Vigor2710 series supports USB interface for connecting USB printer to share printer or USB storage device for sharing files. Vigor2710 series provides two-level management to simplify the configuration of network connection. The user operation allows user accessing into WEB interface via simple configuration. However, if users want to have advanced configurations, they can access into WEB interface through administration operation.

## 1.1 Panel Explanation

### 1.1.1 For Vigor2710

LED	Status	Explanation
ACT (Activity)	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
CSM	On	The profile of CSM (Content Security Management) for IM/P2P, URL Content Filter application is enabled from <b>Firewall &gt;&gt;General Setup</b> . (Such profile is established in <b>Objects Setting &gt;&gt; CSM Profile</b> ).
	Off	The profile of CSM is disabled.
DSL	On	The router is ready to access Internet through DSL link.
	Blinking	Slowly: The modem is ready. Quickly: The connection is training.
LAN 1/2/3/4	On	The port is connected.
	Off	The port is disconnected.
	Blinking	The data is transmitting.
USB	On	A USB device is connected and active.
	Blinking	The data is transmitting.
VPN	On	The VPN tunnel is active.
QoS	On	The QoS function is active.
DoS	On	The DoS/DDoS function is active.
	Blinking	It will blink while detecting an attack.
WCF	On	The Web Content Filter is active. (It is enabled from <b>Firewall &gt;&gt; Web Content Filter</b> )

Interface	Description
DSL	Connector for accessing the Internet through ADSL2/2+.
LAN (1-4)	Connectors for local networked devices.
USB	Connector for USB storage device (Pen Driver/Mobile HD) or printer.

Interface	Description
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
PWR	Connector for a power adapter.
ON/OFF	Power Switch.

## 1.1.2 For Vigor2710n

LED	Status	Explanation
ACT (Activity)	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
WLAN	On	Wireless access point is ready.
	Blinking	It will blink while wireless traffic goes through.
DSL	On	The router is ready to access Internet through DSL link.
	Blinking	Slowly: The modem is ready. Quickly: The connection is training.
LAN 1/2/3/4	On	The port is connected.
	Off	The port is disconnected.
	Blinking	The data is transmitting.
USB	On	A USB device is connected and active.
	Blinking	The data is transmitting.
VPN	On	The VPN tunnel is active.
QoS	On	The QoS function is active.
DoS	On	The DoS/DDoS function is active.
	Blinking	It will blink while detecting an attack.
WPS	On	The WPS connection is on.
	Off	The WPS connection is off.
	Blinking	Waiting for wireless client sending requests for connection about two minutes.
WPS Button	On	Press this button for 2 seconds to wait for client device making network connection through WPS. When the LED lights up, the WPS connection will be on.
	Off	The WPS connection is off.
	Blinking	Waiting for wireless client sending requests for connection about two minutes.

Interface	Description
WLAN	Press the button once to enable (WLAN LED on) or disable (WLAN LED off) wireless connection.
DSL	Connector for accessing the Internet through ADSL2/2+.
LAN (1-4)	Connectors for local networked devices.
USB	Connector for USB storage (Pen Driver /Mobile HD) or printer.

Interface	Description
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
PWR	Connector for a power adapter.
ON/OFF	Power Switch.

### 1.1.3 For Vigor2710Vn

LED	Status	Explanation
ACT (Activity)	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
WLAN	On	Wireless access point is ready.
	Blinking	It will blink while wireless traffic goes through.
DSL	On	The router is ready to access Internet through DSL link.
	Blinking	Slowly: The modem is ready. Quickly: The connection is training.
LAN 1/2/3/4	On	The port is connected.
	Off	The port is disconnected.
	Blinking	The data is transmitting.
USB	On	A USB device is connected and active.
	Blinking	The data is transmitting.
Phone1/ Phone2	On	The phone connected to this port is off-hook.
	Off	The phone connected to this port is on-hook.
	Blinking	A phone call comes.
DoS	On	The DoS/DDoS function is active.
	Blinking	It will blink while detecting an attack.
WPS	On	The WPS connection is on.
	Off	The WPS connection is off.
	Blinking	Waiting for wireless client sending requests for connection about two minutes.
WPS Button	On	Press this button for 2 seconds to wait for client device making network connection through WPS. When the LED lights up, the WPS connection will be on.
	Off	The WPS connection is off.
	Blinking	Waiting for wireless client sending requests for connection about two minutes.

Interface	Description
WLAN	Press the button once to enable (WLAN LED on) or disable (WLAN LED off) wireless connection.
DSL	Connector for accessing the Internet through ADSL2/2+.
LAN (1-4)	Connectors for local networked devices.
USB	Connector for USB storage (Pen Driver/Mobile HD) or printer.

Interface	Description
Line	Connector for PSTN life line.
Phone2/Phone1	Connector of analog phone for VoIP communication.
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
PWR	Connector for a power adapter.
ON/OFF	Power Switch.

## 1.2 Package Content

**1** Quick Start Guide

**2** CD

**3** RJ-45 Cable (Ethernet)

**4** Antenna (n models)

**5** The type of the cable depends on the country that the router will be installed:

**RJ-11 to RJ-11 Cable  
(Annex A)**

Or

**RJ-11 to RJ-45 Cable  
(Annex B)**

Or

**RJ-45 to RJ-45 Cable  
(Annex B)**

**6** The type of the power adapter depends on the country that the router will be installed.  
\* The maximum power consumption is **17-23 Watt**.

**UK-type Power Adapter**

**EU-type Power Adapter**

**USA/Taiwan-type Power Adapter**

**AU/NZ-type Power Adapter**

## 2. Installing Your Router

This section will guide you to install the router through hardware connection and configure the router's settings through web browser.

### 2.1 Hardware Installation

Before starting to configure the router, you have to connect your devices correctly.

1. Connect the ADSL interface to the external ADSL splitter with an ADSL line cable for all models. For Vigor2710Vn, also connect Line interface to external ADSL splitter.

2. Connect one end of an Ethernet cable (RJ-45) to one of the **LAN** ports of the router and the other end of the cable (RJ-45) into the Ethernet port on your computer.
3. Connect the telephone sets with phone lines (for using VoIP function). For the model without phone ports, skip this step.
4. Connect one end of the power adapter to the router's power port on the rear panel, and the other side into a wall outlet.
5. Power on the device by pressing down the power switch.
6. The system starts to initiate. After completing the system test, the **ACT** LED will light up and start blinking.

Here, we take ***Annex A*** model as an example for describing hardware installation.

(For the detailed information of LED status, please refer to section 1.1.)

---

**Caution:** Each of the Phone ports can be connected to an analog phone only. Do not connect the phone ports to the telephone wall jack. Such connection might damage your router.

---

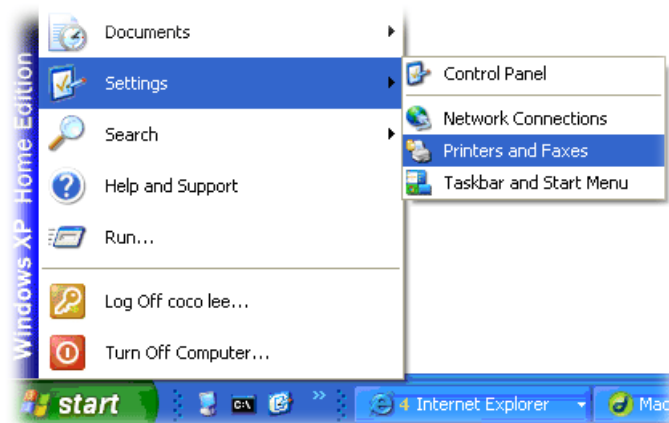

## 2.2 Printer Installation

You can install a printer onto the router for sharing printing. All the PCs connected this router can print documents via the router. The example provided here is made based on Windows XP/2000. For Windows 98/SE/Vista, please visit [www.draytek.com](http://www.draytek.com).

Before using it, please follow the steps below to configure settings for connected computers (or wireless clients).

1. Connect the printer with the router through USB port.
2. Open **Start->Settings-> Printer and Faxes**.

3. Open **File->Add a New Computer**. A welcome dialog will appear. Please click **Next**.

4. Click **Local printer attached to this computer** and click **Next**.

5. In this dialog, choose **Create a new port Type of port** and use the drop down list to select **Standard TCP/IP Port**. Click **Next**.

6. In the following dialog, type **192.168.1.1** (router's LAN IP) in the field of **Printer Name or IP Address** and type **IP\_192.168.1.1** as the port name. Then, click **Next**.

The screenshot shows the 'Add Standard TCP/IP Printer Port Wizard' dialog box, specifically the 'Add Port' step. The title bar reads 'Add Standard TCP/IP Printer Port Wizard'. Below the title bar, the text 'Add Port' is followed by 'For which device do you want to add a port?'. A printer icon is in the top right corner. The main area contains the instruction 'Enter the Printer Name or IP address, and a port name for the desired device.' There are two text input fields: 'Printer Name or IP Address:' with the value '192.168.1.1' and 'Port Name:' with the value 'IP\_192.168.1.1'. At the bottom, there are three buttons: '< Back', 'Next >', and 'Cancel'.

7. Click **Standard** and choose **Generic Network Card**.

The screenshot shows the 'Add Standard TCP/IP Printer Port Wizard' dialog box, specifically the 'Additional Port Information Required' step. The title bar reads 'Add Standard TCP/IP Printer Port Wizard'. Below the title bar, the text 'Additional Port Information Required' is followed by 'The device could not be identified.' and a printer icon. The main area contains the text 'The detected device is of unknown type. Be sure that:' followed by a numbered list: '1. The device is properly configured.' and '2. The address on the previous page is correct.' Below this, it says 'Either correct the address and perform another search on the network by returning to the previous wizard page or select the device type if you are sure the address is correct.' There is a 'Device Type' section with two radio buttons: 'Standard' (which is selected and circled in red) and 'Custom'. Next to 'Standard' is a dropdown menu showing 'Generic Network Card'. There is also a 'Settings...' button. At the bottom, there are three buttons: '< Back', 'Next >', and 'Cancel'.

8. Then, in the following dialog, click **Finish**.

The screenshot shows the 'Add Standard TCP/IP Printer Port Wizard' dialog box, specifically the 'Completing the Add Standard TCP/IP Printer Port Wizard' step. The title bar reads 'Add Standard TCP/IP Printer Port Wizard'. Below the title bar, the text 'Completing the Add Standard TCP/IP Printer Port Wizard' is followed by 'You have selected a port with the following characteristics:' and a printer icon. The main area contains a list of characteristics: 'SNMP: No', 'Protocol: RAW, Port 9100', 'Device: 192.168.1.1', 'Port Name: IP\_192.168.1.1', and 'Adapter Type: Generic Network Card'. Below this, it says 'To complete this wizard, click Finish.' At the bottom, there are three buttons: '< Back', 'Finish', and 'Cancel'.

9. Now, your system will ask you to choose right name of the printer that you installed onto the router. Such step can make correct driver loaded onto your PC. When you finish the selection, click **Next**.

10. For the final stage, you need to go back to **Control Panel-> Printers** and edit the property of the new printer you have added.

11. Select "LPR" on Protocol, type **p1** (number 1) as Queue Name. Then click **OK**. Next please refer to the red rectangle for choosing the correct protocol and UPR name.

The printer can be used for printing now. Most of the printers with different manufacturers are compatible with vigor router.

---

**Note 1:** Some printers with the fax/scanning or other additional functions are not supported. If you do not know whether your printer is supported or not, please visit [www.draytek.com](http://www.draytek.com) to find out the printer list. Open **Support Center->FAQ->Sort by product**; select the model of the router and click on it; find out the link of **Printer Server FAQ**; click the **What types of printers are compatible with Vigor router?** link.

**Note 2:** Vigor router supports printing request from computers via LAN ports but not WAN port.

---

## 3. Configuring Web Pages

To access Internet, please finish basic configuration after completing the hardware installation.

### 3.1 Accessing Web Page

1. Make sure your PC connects to the router correctly.

---

**Notice:** You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as **the default IP address of Vigor router 192.168.1.1**. For the detailed information, please refer to the later section - Trouble Shooting of the guide.

---

2. Open a web browser on your PC and type **http://192.168.1.1**. The following window will be open to ask for username and password.

3. For user's operation, do not type any word on the window and click **Login** for the simple web pages for configuration. Yet, for administrator's operation, please type "admin/admin" on Username/Password and click **Login** for full configuration.

---

**Notice:** If you fail to access to the web configuration, please go to "Trouble Shooting" for detecting and solving your problem.

---

4. The web page can be logged out according to the chosen condition. The default setting is **Auto Logout**, which means the web configuration system will logout after five minutes without any operation. Change the setting for your necessity.

## 3.2 Basic Configuration

The **Quick Start Wizard** is designed for you to easily set up your router for Internet access. You can directly access the **Quick Start Wizard** via Web Configurator.

1. Open a web browser on your PC and type **http://192.168.1.1**. The system will ask you to type username/password. The displayed web pages will change according to the username and password typed. Here we take simple web pages for example. So, do not type any word on the window and click **Login**.

**Notice:** For advanced configuration (administrator operation), please refer to User's Guide for more detailed information.

2. Now, the **Main Screen** for user operation will appear. Click **Quick Start Wizard**.

Default Gateway	<input type="text"/>	
Primary DNS	<input type="text"/>	
Second DNS	<input type="text"/>	

5. Now you can see the following screen. It indicates that the setup is complete. Different types of connection modes will have different summary. Click **Finish** and then restart the router. Afterward, you will enjoy surfing on the Internet.

#### Quick Start Wizard

##### Please confirm your settings:

VPI:	0
VCI:	33
Protocol / Encapsulation:	1483 Bridge LLC
Fixed IP:	No
Primary DNS:	
Secondary DNS:	

## 3.3 Wireless Configuration

For the user of Vigor2710, please skip this section.

For operating Vigor2710n/Vn well, it is necessary for you to set the wireless LAN settings for using wireless function. Please read the following section carefully for configuring the settings for this router.

(The default value of Frequency Domain was set by factory depends on the reselling region.)

### 3.3.1 Basic Wireless LAN Concept

In an Infrastructure Mode of wireless network, Vigor wireless router plays a role as an **Access Point (AP)** connecting to lots of wireless clients or Stations (STA). All the STAs (clients) will share the same Internet connection with other wired hosts via Vigor wireless router.

### 3.3.2 General Setup

1. On the **Wireless LAN** group, select **General Setup**. The following page will be shown as below.

## General Setting ( IEEE 802.11 )

☒ Enable Wireless LAN

Mode : Mixed(11b+11g+11n) ▼

Index(1-15) in [Schedule](#) Setup: , , ,

Only schedule profiles that have the action "Force Down" are applied to the WLAN, all other actions are ignored.

SSID: default

Channel : Channel 6, 2437MHz ▼

Packet-OVERDRIVE™
 

☐ Tx Burst

**Note:**

- 1.Tx Burst only supports 11g mode.
- 2.The same technology must also be supported in clients to boost WLAN performance.

☐ Hide SSID

☐ Long Preamble

**Hide SSID:** prevent SSID from being scanned.

**Long Preamble:** necessary for some older 802.11b devices only (lowers performance).

OK

Cancel

2. Check **Enable Wireless LAN** to enable the wireless function.
3. At present, the router can connect to 11g Only, 11b Only, 11n Only, Mixed (11b+11g), Mixed (11g+11n) and Mixed (11b+11g+11n) stations simultaneously. Simply choose Mix (11b+11g+11n) mode.
4. Type in the name of the **SSID**. The default name for SSID is **default**. We suggest you change it to a particular name for your necessity.

**SSID (Service Set Identifier)** - It is used to name the wireless LAN for this router, and it must have the same content in client PC/notebook wireless card(s). SSID can be any text numbers or various special characters.

5. The default channel is 6. You can change it to an appropriate one if the selected channel is under serious interference.

### 3.3.3 Security Settings

1. On the **Wireless LAN** group, select **Security Settings**.

[Wireless LAN >> Security Settings](#)

**Security Settings**

**Mode:** Disable

**WPA:**

Encryption Mode: TKIP

Pre-Shared Key(PSK):

Type 8~63 ASCII character or 64 Hexadecimal digits leading by "0x", for example "cfs01a2..." or "0x655abcd..."

**WEP:**

Encryption Mode: 64-Bit

☒ Key 1 :

☐ Key 2 :

☐ Key 3 :

☐ Key 4 :

**For 64 bit WEP key**  
Type 5 ASCII character or 10 Hexadecimal digits leading by "0x", for example "AB312" or "0x4142333132".

**For 128 bit WEP key**  
Type 13 ASCII character or 26 Hexadecimal digits leading by "0x", for example "0123456789abc" or "0x30313233343536373839414243".

2. Select an appropriate encryption mode to improve the security and privacy of your wireless data packets.

Mode: Disable

Disable  
WEP  
WPA/PSK  
WPA2/PSK  
Mixed(WPA+WPA2)/PSK

<b>Disable</b>	Turn off the encryption mechanism. For the security of your router, please select any one of the encryption mode here.
<b>WEP</b>	Accepts only WEP clients and the encryption key should be entered in WEP Key.
<b>WPA/PSK</b>	Accepts only WPA clients and the encryption key should be entered in PSK.
<b>WPA2/PSK</b>	Accepts only WPA2 clients and the encryption key should be entered in PSK.
<b>Mixed (WPA+WPA2)/PSK</b>	Accepts WPA and WPA2 clients simultaneously and the encryption key should be entered in PSK.

3. For **WPA** encryption, type in 8~63 ASCII characters or 64 Hexadecimal digits leading by 0x, for example "0123456789ABCD...." or "0x321253abcde....." on the field of **Pre-Shared Key (PSK)**. WPA encrypts each frame transmitted from the radio using the Pre-Shared Key (PSK) which entered from this panel.

4. As to **WEP** encryption, select 64-bit or 128-bit as the encryption mode. For 64bits WEP key, type in 5 ASCII characters or 10 hexadecimal digitals leading by 0x, for example, ABCDE or 0x4142434445. And for 128bits WEP key, type in 13 ASCII characters or 26 hexadecimal digits leading by 0x, for example, ABCDEFGHIJKLM or 0x4142434445464748494A4B4C4D. Only one WEP key can be selected and allows user to type in the characters.
5. Click **OK** to save settings.

Be aware that for the communication, all wireless devices must support the same encryption bit length and share the same key. If WEP mode is selected, only one of four preset keys can be selected at one time.

## 4. Trouble Shooting

This section will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer for advanced help.

### 4.1 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

1. Check the power line and LAN cable connections. Refer to “**2.1 Hardware Installation**” for details.
2. Turn on the router. Make sure the **ACT LED** blink once per second and the correspondent **LAN LED** is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to “**2.1 Hardware Installation**” to execute the hardware installation again. And then, try again.

## 4.2 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is still failed, please do the steps listed below to make sure the network connection settings is OK.

### For Windows

The example is based on Windows XP. As to the examples for other operation systems, please refer to the similar steps or find support notes in [www.draytek.com](http://www.draytek.com).

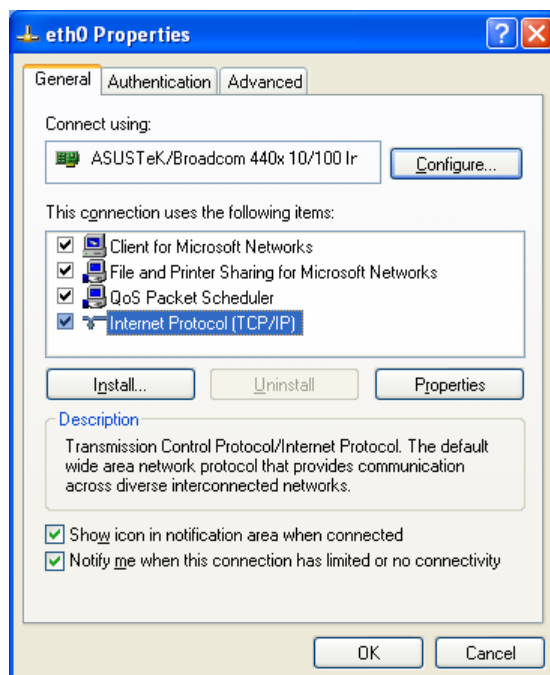

1. Go to **Control Panel** and then double-click on **Network Connections**.

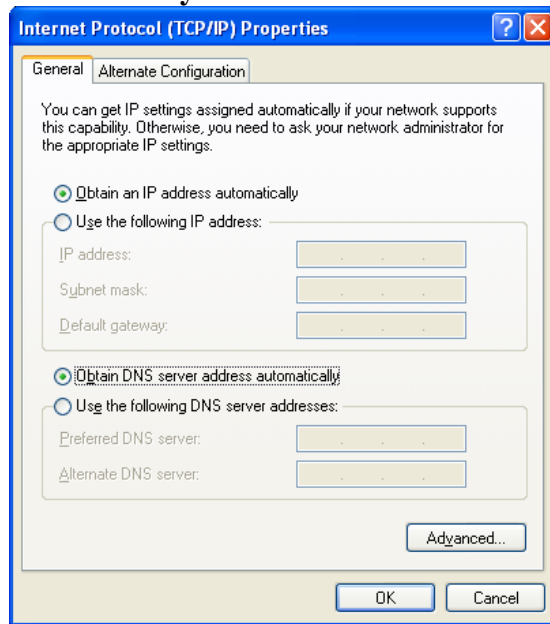

2. Right-click on **Local Area Connection** and click on **Properties**.

3. Select **Internet Protocol (TCP/IP)** and then click **Properties**.

4. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**.

## For MacOS

1. Double click on the current used MacOS on the desktop.
2. Open the **Application** folder and get into **Network**.
3. On the **Network** screen, select **Using DHCP** from the drop down list of Configure IPv4.

## 4.3 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use “ping” command to check the link status of the router. **The most important thing is that the computer will receive a reply from 192.168.1.1.** If not, please check the IP address of your computer. We suggest you setting the network connection as **get IP automatically**. (Please refer to the section 4.2)

Please follow the steps below to ping the router correctly.

### For Windows

1. Open the **Command Prompt** window (from **Start menu> Run**).
2. Type **command** (for Windows 95/98/ME) or **cmd** (for Windows NT/2000/XP/Vista). The DOS command dialog will appear.

```

C:\> Command Prompt
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

D:\Documents and Settings\fae>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

D:\Documents and Settings\fae>_

```

3. Type **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of “**Reply from 192.168.1.1:bytes=32 time<1ms TTL=255**” will appear.
4. If the line does not appear, please check the IP address setting of your computer.

### For MacOs (Terminal)

1. Double click on the current used MacOs on the desktop.
2. Open the **Application** folder and get into **Utilities**.
3. Double click **Terminal**. The Terminal window will appear.
4. Type **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of “**64 bytes from 192.168.1.1: icmp\_seq=0 ttl=255 time=xxxx ms**” will appear.

```
Terminal — bash — 80x24

round-trip min/avg/max = 0.697/0.723/0.755 ms
Vigor10:~ draytek$
```

## 4.4 Checking If the ISP Settings are OK or Not

Open **Internet Access** page and then check whether the ISP settings are set correctly.  
Click PPPoE/PPPoA/MPoA/Multi-PVCs link to review the settings that you configured previously.

### For PPPoE/PPPoA Users

1. Check if the **Enable** option is selected.
2. Check if **Username** and **Password** are entered with correct values that you **got from your ISP**.

2. Check if **DSL Modem Settings** is set appropriately.
3. Check if **IP Address**, **Subnet Mask** and **Gateway** are set correctly (must identify with the values from your ISP) if you choose **Specify an IP address**.

## 4.5 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware.

**Warning:** After pressing **factory default setting**, you will lose all settings you did before. Make sure you have recorded all useful settings before you pressing. The password of factory default is null.

## Software Reset

You can reset the router to factory default via Web page.

Go to **System Maintenance** and choose **Reboot System** on the web page. The following screen will appear. Choose **Using factory default configuration** and click **OK**. After few seconds, the router will return all the settings to the factory settings.

#### Reboot System

Do you want to reboot your router ?

- ☒ Using current configuration
- ☐ Using factory default configuration

OK

### Hardware Reset

While the router is running (ACT LED blinking), press the **Factory Reset** button and hold for more than 5 seconds. When you see the **ACT** LED blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

## 4.6 Contacting Your Dealer

If the router still cannot work correctly after trying many efforts, please contact your dealer for further help right away. For any questions, please feel free to send e-mail to [support@draytek.com](mailto:support@draytek.com).
