Release Note for VigorPhone 350

Firmware Version: 12202.26.1.03
Built Date: September 10, 2009
Applied Models: VigorPhone 350

VigorPhone enables you to make phone calls through the IP network instead of calling through a tradition local PSTN line.

It is workable with VigorIPPBX series for auto provision capability. To manage various calling purposes, VigorPhone supports multi-sip registration with different accounts (up to 10) and support G.722 codec for promoting voice quality. The simple WEB UI based configuration allows you to operate VigorPhone with ease.

New Features

- Increase the length of account to 8 characters for LCM.
- Add **Debug Mod**e in **Phone Settings>>Other Settings**.
- Enable the function of Auto Provision.
- Enable the function of mDNS.
- Add the function of STUN in **Phone Settings>>Other Settings**.

Improvement

- Fixed: The compatibility for SIP ("i2next.com.mx")
- Fixed: After deleting the Call History on WUI, there is still one miss call existed in IP Phone LCD.
- Fixed: Asterisk will send the message "401 Unauthorized" back after subscribing and cause BLF not being able to operate normally.
- Fixed: SIP can not be operated normally when PPPoE connection is successful.
- Fixed: Display error in IE8.
- Fixed: Slow reaction for the buttons.
- Improved: DNS on PPPoE.
- Improved: NAT/Bridge problem.
- Improved: Synchronization for expires time and register time in the SUBSCRIBE command sent by MWI.
