

CMS Version 3.6.2 Release Note

October 2nd, 2009

Language Support

- Add Sweden Language

System Improvement

- Add a driver of reading Linux HDD and support DG600 to read HDD raw data
- Add IP Camera Icon
- Improve the speed of purging file
- Improve the speed of adding raw data into AVI trans-coding list

Behavior Changes

- Add the function of certificate when NW RTSP is connected

Bug Fixes

- Sometimes camera title cannot be showed correctly
- Cannot open DVR configuration
- After selecting site by device search, it won't cancel DDNS checkbox automatically and show IP address
- When HDD in PC is full of data(or data is over threshold), CMS cannot archive DVR data
- Sometimes dome control function cannot be used
- Sometimes raw date cannot be transfered to AVI files
- When user uncheck "ShowTime" at CMS player, [S] & [W] are still showed
- CMS player cannot transfer DRV file to AVI file
- Sometimes it shows wrong name when adding/removing file to AVI transfer list
- Sometimes raw data cannot be listed/played normally
- When playing raw data, sometime slider bar cannot be dragged normally
- Dome control function will hang at EMAP dialog
